| Station          | Hong Kong<br>International Airport                      | King's Park                            |  |                              | Waglan Island                                |                                 |

The minimum pressure recorded at the Hong Kong Observatory was 1013.3 hectopascals at 1525 HKT on 1 December and at 1512 HKT on 16 December.

The maximum air temperature recorded at the Hong Kong Observatory was 26.2 degrees C at 1253 HKT on 16 December.

The minimum air temperature recorded at the Hong Kong Observatory was 7.1 degrees C at 0650 HKT on 31 December.

The maximum gust peak speed recorded at Waglan Island was 85 kilometres per hour from 010 degrees at 0230 HKT on 30 December.

The maximum instantaneous rate of rainfall recorded at King's Park was 62 millimetres per hour at 1937 HKT on 29 December.

# Reduced visibility refers to visibility below 8 kilometres when there is no fog, mist, or precipitation.

-The visibility readings at the Hong Kong International Airport are based on hourly observations by professional meteorological observers in 2004 and before, and average readings over the 10-minute period before the clock hour of the visibility meter near the middle of the south runway from 2005 onwards. The change of the data source in 2005 is an improvement of the visibility assessment using instrumented observations following the international trend.

-Before 10 October 2007, the number of hours of reduced visibility at the Hong Kong International Airport in 2005 and thereafter displayed in this web page was based on hourly visibility observations by professional meteorological observers. Since 10 October 2007, the data have been revised using the average visibility readings over the 10- minute period before the clock hour, as recorded by the visibility meter near the middle of the south runway.
