Station	Hong Kong	King's Park			Waglan Island	

International Airport

The minimum pressure recorded at the Hong Kong Observatory was 1007.3 hectopascals at 2016 HKT on 30 March.

The maximum air temperature recorded at the Hong Kong Observatory was 27.6 degrees C at 1448 HKT on 27 March.

The minimum air temperature recorded at the Hong Kong Observatory was 13.9 degrees C at 0741 HKT on 10 March.

The maximum gust peak speed recorded at Waglan Island was 94 kilometres per hour from 010 degrees at 0941 HKT on 31 March.

The maximum instantaneous rate of rainfall recorded at the Hong Kong Observatory was 374 millimetres per hour at 2035 HKT on 30 March.

Reduced visibility refers to visibility below 8 kilometres when there is no fog, mist, or precipitation.

-The visibility readings at the Hong Kong International Airport are based on hourly observations by professional meteorological observers in 2004 and before, and average readings over the 10-minute period before the clock hour of the visibility meter near the middle of the south runway from 2005 onwards. The change of the data source in 2005 is an improvement of the visibility assessment using instrumented observations following the international trend.

-Before 10 October 2007, the number of hours of reduced visibility at the Hong Kong International Airport in 2005 and thereafter displayed in this web page was based on hourly visibility observations by professional meteorological observers. Since 10 October 2007, the data have been revised using the average visibility readings over the 10- minute period before the clock hour, as recorded by the visibility meter near the middle of the south runway.
