Station	Hong Kong International Airport	King's Park			Waglan Island	

The minimum pressure recorded at the Hong Kong Observatory was 1009.0 hectopascals at 0450 HKT on 2 April.

The maximum air temperature recorded at the Hong Kong Observatory was 29.0 degrees C at 1331 HKT on 27 April.

The minimum air temperature recorded at the Hong Kong Observatory was 17.5 degrees C at 1714 HKT on 6 April.

The maximum gust peak speed recorded at Waglan Island was 65 kilometres per hour from 090 degrees at 0023 HKT on 7 April.

The maximum instantaneous rate of rainfall recorded at King's Park was 187 millimetres per hour at 0441 HKT on 3 April.

Reduced visibility refers to visibility below 8 kilometres when there is no fog, mist, or precipitation.

-The visibility readings at the Hong Kong International Airport are based on hourly observations by professional meteorological observers in 2004 and before, and average readings over the 10-minute period before the clock hour of the visibility meter near the middle of the south runway from 2005 onwards. The change of the data source in 2005 is an improvement of the visibility assessment using instrumented observations following the international trend.

-Before 10 October 2007, the number of hours of reduced visibility at the Hong Kong International Airport in 2005 and thereafter displayed in this web page was based on hourly visibility observations by professional meteorological observers. Since 10 October 2007, the data have been revised using the average visibility readings over the 10- minute period before the clock hour, as recorded by the visibility meter near the middle of the south runway.
